

Onxeo to Attend Key Investor and Scientific Conferences

Paris (France), September 11, 2019 – 5.45 pm CEST - Onxeo S.A. (Euronext Paris, NASDAQ Copenhagen: ONXEO - FR0010095596), (“**Onxeo**” or “the **Company**”), a clinical-stage biotechnology company specializing in the development of innovative drugs targeting tumor DNA Damage response (DDR) in oncology, in particular against rare or resistant cancers, today announced that its management team will attend the following key investor and scientific conferences in the coming months:

- **Investir Day**

October 15, 2019, Paris, France

A new event providing shareholders and retail investors with the opportunity to meet and discuss with executives of listed companies. A masterclass session by Judith Greciet, CEO of Onxeo, is scheduled during the event.

- **The Galien Medstartup 2019**

October 24, 2019, in New York, NYC, United-States

The Galien Foundation fosters, recognizes and rewards excellence in scientific innovation to improve the state of human health. Its vision is to be the catalyst for the development of the next generation of innovative treatment and technologies that will impact human health and save lives.

- **AACR-NCI-EORTC International Conference on Molecular Targets and Cancer Therapeutics**

October 26-30, 2019, in Boston, MA, United-States

The premier international meeting featuring novel cancer therapeutics organized by the American Association for Cancer Research (AACR), the National Cancer Institute (NCI) and the European Organisation for Research and Treatment of Cancer (EORTC).

- **Direct Dirigeants event with Les Echos – Investir**

November 6, 2019, in Paris, France

Presentation by Judith Greciet, CEO of Onxeo, to individual investors and shareholders.

- **2nd Annual DNA Damage Response Therapeutics Summit**

January 29-31, 2019, in Boston, MA, United-States

The Summit brings together the leading pharma and biotech companies accelerating the development of DNA repair pathway inhibitors, to optimize drug discovery, broaden patient population and generate greater efficacy.

About Onxeo

Onxeo (Euronext Paris, NASDAQ Copenhagen: ONXEO) is a clinical-stage biotechnology company developing innovative oncology drugs targeting tumor DNA-binding functions through unique mechanisms of action in the sought-after field of DNA Damage Response (DDR). The Company is focused on bringing early-stage first-in-class or disruptive compounds from translational research to clinical proof-of-concept, a value-creating inflection point appealing to potential partners.

platON™ is Onxeo’s proprietary chemistry platform of oligonucleotides acting as decoy agonists, which generates new innovative compounds and broaden the Company’s product pipeline.

AsiDNA™, the first compound from platON™, is a first-in-class, highly differentiated DNA Damage Response (DDR) inhibitor based on a decoy and agonist mechanism acting upstream of multiple DDR pathways. Translational research has highlighted

the distinctive properties of AsiDNA™, notably its ability to abrogate tumor resistance to PARP inhibitors regardless of the genetic mutation status. AsiDNA™ has also shown a strong synergy with other tumor DNA-damaging agents such as chemotherapy and PARP inhibitors. The DRIIV-1 (DNA Repair Inhibitor-administered IntraVenously) phase I study has evaluated AsiDNA™ by systemic administration (IV) in advanced solid tumors and confirmed the active doses as well as a favorable human safety profile. The ongoing DRIIV-1b extension study is assessing the safety and efficacy of a 600 mg dose of AsiDNA™ in combination with carboplatin, and carboplatin and paclitaxel, in patients with solid tumors who are eligible for such treatments.

OX401 is a new drug candidate from platON™, optimized to be a next-generation PARP inhibitor acting on both the DNA Damage Response and the activation of immune response, without inducing resistance. In vivo preclinical proof-of-concept data are expected early Q4 2019.

Onxeo's portfolio also includes **belinostat**, an HDAC inhibitor (epigenetics). Belinostat is already conditionally FDA-approved in the US as a 2nd line treatment for patients with peripheral T cell lymphoma and marketed in the US under the name Beleodaq® (belinostat IV form).
